

Plate Heat Exchangers

HYDAC HEX Sxxx

Hxxx-LIQUID

General

Plate heat exchangers are used wherever thermal energy (heat) has to be transferred from one fluid to another.

The advantage is that they can maintain the fluid temperature at a very low and stable level – depending on the temperature of the coolant.

Plate heat exchangers consist of a stack of stamped heat exchange plates which are either brazed together or bolted together in a frame with gaskets.

Medium flows in the channels between the plates where hot medium (which will be cooled) alternates with cold medium (which will be heated). The design of the plates induces the turbulent flow required for efficient heat transfer.

Brazed Plate Heat Exchangers HYDAC HEX Sxxx

The design and construction of the **brazed plate heat exchangers** are particularly compact and efficient. The heat transfer plates are made in stainless steel and are brazed with copper as standard. For use with aggressive media, nickel braze can also be used.

Copper brazed plate heat exchangers are pressure resistant up to 30 bar, nickel brazed up to 10 bar. Special models are however also suitable for higher pressures.

Gasketed Plate Heat Exchangers Hxxx-LIQUID

Gasketed plate heat exchangers are particularly suitable for large flows and high cooling capacities. The stack of heat transfer plates and gaskets is clamped together with bolts in a frame.

This means that the plate heat exchanger can also be dismantled for cleaning and maintenance. Furthermore it is possible to add more plates at a later date to achieve a higher capacity.

For applications with seawater, the plate heat exchangers can also be supplied with titanium heat transfer plates.

Various stamp designs can cater for heavily contaminated or high viscosity fluids to suit particular applications, or even if the temperature difference between the hot and cold medium is only minimal.

Safety heat exchangers with double-walled plates are used in situations where different media must be strictly isolated.

Function

Fluids flow in counterflow through the plate heat exchanger:

In counterflow, the hot medium is cooled more rapidly than in parallel flow because the cold medium flows in the opposite direction to the hot fluid.

With **brazed plate heat exchangers** it is possible to reverse the inlet and outlet connections of a medium without adversely affecting the function. However, to guarantee the counterflow principle, the inlet and outlet of the other medium must also be changed. However, changing the cold and hot side is not recommended. The plate heat exchangers are designed to have hot fluid always flowing through the outer plate. If cold medium flows through, condensation could form on the outside of the heat exchanger.

With **gasketed plate heat exchangers** it is not possible to change the connections because of the more complex plate stamp pattern. In this case the connections can be selected before manufacture of the plate heat exchanger. Please consult our technical sales department.

Application Field

A plate heat exchanger can be used wherever there should be heat transfer between two media.

Typical applications are:

- Hydraulic systems
- Presses
- Lubrication systems
- Test rigs
- Motors/engines

Sectional View

Cross-section of a **brazed plate heat exchanger**

Cooling Capacity

The maximum **cooling capacity** of a plate heat exchanger depends on several factors:

- the inlet temperature of the hot and cold medium
- the flow rate of the hot and cold medium
- the media used.

Sizing Program

The sizing program for **brazed plate heat exchangers**

helps you to select the right size and number of plates.

Please ask for the latest version from the technical sales department.

Type	Plate No.	Series	Parallel	Required heat load kW	Margin %	Press. drop of side 1 bar	Press. drop of side 2 bar	Note
HEX S400								No Solution
HEX S610	110	1	1	10,0	-1,6	0,01	0,03	
HEX S615	30	1	1	10,0	2,0	0,07	0,19

Max. pressure drop: _____ bar

Comments

Brazed Plate Heat Exchangers HYDAC HEX Sxxx

Symbol

General

With plate heat exchangers, the heat from the fluid being cooled is transferred to a cooling fluid. The advantage is that they can maintain the fluid temperature at a very low and stable level – depending on the temperature of coolant. Brazed heat exchangers therefore ensure efficient heat transfer combined with compact dimensions and low weight.

Product Features

Brazed heat exchangers consist of a stack of stamped heat transfer plates with connections in stainless steel. The plates are vacuum brazed with copper or nickel.

The plates have smoothed edges and the end plate is provided with edge protection.

The special stamp pattern of the plates induces a turbulent flow which is necessary for optimum heat transfer and which in addition has a self-cleaning effect because the high level of wall friction reduces deposits on the surface.

Operating data

Plate material	Stainless steel 1.4401 (AISI 316)
Braze material	Copper (standard), nickel
Pressures	Copper braze: max. 30 bar (test pressure 45 bar) Nickel braze: max. 10 bar Other pressures on request
Media	- Hydraulic oil, lubrication oil, rolling oil, engine oil - HFC, HFA, HFD, pressure fluids - Water, water glycol - Refrigerant Use nickel-brazed plate heat exchangers with corrosive fluids: e.g. ammonia, sulphides and sulphates, deionised or demineralised water Other fluids on request
Temperature range	up to +200 °C (freezing point and boiling point must be taken into consideration)
Contamination	The quantity of particles in suspension should be less than 10 mg/l Particle size <0.6 mm (spherical) Thread-like particles cause a rapid rise in pressure drop
Water quality	The following ions are not corrosive under normal conditions: phosphate, nitrate, nitrite, manganese, sodium and potassium See table on water quality
Connections	Female thread (standard) Optional: male thread, soldered connection, SAE connection
Accessories	Installation: HYDAC clamping bands (standard), optional: bolts on the front plate or the end plate Insulation

Application Field

Cooling circuits operated using water, coolant, HFC operating fluid or oil.

Typical applications are:

- Machine tools
- Presses
- Injection moulding machines
- Motors/engines
- Test rigs
- Generators

Oil cooling

Heat pump

Chiller

Vacuum pump

Model Type

HYDAC HEX S400 -10 -00NI / G3/4"

Size

HYDAC HEX S400
HYDAC HEX S610
HYDAC HEX S615
HYDAC HEX S522
HYDAC HEX S722
HYDAC HEX Z800

Other sizes on request

Number of plates

	10	14	20	30	40	50	60	70	80	90	100	120	150	160	180	190

HYDAC HEX S522		•	•	•	•	•	•	•	•	•	•	•	•	•	•	•

Version with nickel braze (optional)

Connections (standard)

HYDAC HEX S400: 4 x G $\frac{3}{4}$ " female thread

HYDAC HEX S610 and HYDAC HEX S615: 4 x G1" female thread

HYDAC HEX S722: 4 x G1 $\frac{1}{2}$ " female thread

HYDAC HEX S522: 4 x G1 $\frac{1}{2}$ " female thread

Male threaded, soldered and SAE connections are also available as an option.

The pipes must be connected so that connections are stress-free.

Linear expansion and vibrations from the pipes to the heat exchanger must be avoided.

Water Quality

The following limits refer to copper-brazed plate heat exchangers and a water temperature of + 60°C:

Substances dissolved in water	Concentration (ppm)	Stainless steel	Copper
pH value	<6.0 6.0 – 9.0 >9.0	0 + +	0 + 0
Electrical conductivity	<10 [μ S/cm] 10 – 500 [μ S/cm] >500 [μ S/cm]	+ + +	0 + 0
Cl ⁻	<300	+	+
SO ₄ ⁻²	<50 50 – 300 >300	+ + 0	+ 0 0
CaCO ₃	<50	+	+
Fe	<0.3 >0.3	+ +	+ 0
NH ₃	<2 >2	+ +	+ 0
NO ₃	<100 >100	+ +	+ 0
S ⁻²		Not suitable	
SiO ₂	<30	+	+
NH ₄ ⁺	<0.1	+	+
Free chlorine	<0.1	+	+
CO ₃ ⁻²	<0.4	+	+
H ₂ S	<0.05 >0.05	+ +	+ 0

0: Corrosive

+: Suitable

For nickel-brazed versions, please contact the technical sales department.

Please note:

For mounting heat exchangers with 60 plates and above, two clamps are recommended.

Gasketed Plate Heat Exchangers Hxxx-LIQUID

Symbol

General

With plate heat exchangers, the heat from the fluid being cooled is transferred to a cooling fluid. The advantage is that they can maintain the fluid temperature at a very low and stable level – depending on the temperature of coolant.

Gasketed plate heat exchangers are particularly suitable for large flows and high cooling capacities and are therefore a useful supplement to the brazed range.

Product Features

Gasketed plate heat exchangers consist of a stack of individually stamped heat transfer plates and gaskets. The plate stack is clamped using bolts in a frame consisting of a fixed cover and a moveable cover. The advantage is that the plate heat exchanger can also be dismantled for cleaning and maintenance. Furthermore it is possible to add more plates at a later date to achieve a higher capacity.

There are several sizes with varying numbers of plates and different stamp designs available to cover the capacity range. In this way they can cater for heavily contaminated or high viscosity fluids, or even if the temperature difference between the hot and cold medium is only minimal.

Operating Data

Plate material	Stainless steel 1.4401 (AISI 316), 1.4306 (AISI 304) SMO Titanium
Plate thickness	0.4 – 0.6 mm
Seals	NBR (HT) EPDM Viton
Connections	Threaded pipe, male Flange (up to DN300) Note: The connection interface can only be altered before manufacture.
Paint colour	RAL 5010 Corrosion class: C2L Other paint finishes on request
Media	Hydraulic oil, lubrication oil, rolling oil, engine oil HFC, HFA, HFD, operating fluids water, water-glycol, seawater (with titanium plates) Limited possibility: steam applications
Operating temperature	up to 140 °C
Pressure ranges	10 bar, 16 bar, 25 bar Note: Pressure surges must be avoided
Flow rate	up to 2,000 m³/h
Cooling capacity	up to 30,000 kW (dependent on the inlet temperature of the media and the flow rate)
Contamination	The level of particles in suspension should be less than 10 mg/l Particle size: <0.6 mm (spherical); thread-like particles cause a rapid rise in pressure drop.
Water quality	See table on water quality
Options	Safety heat exchanger Dual unit with change-over valve Insulation

Depending on the individual situation, special models using higher grade materials are available, e.g. titanium plates are used for seawater applications.

Application Field

Cooling circuits in counterflow which are operated using water, coolant, HFC operating fluids or oil. For applications using other fluids please contact the specialist department.

Typical applications are:

- Hydraulic systems
- Presses
- Lubrication systems
- Test rigs
- Motors / engines
